DSAI L4

Lead Specialist, JR9 = Tier 4 SEA Competency (LTS)

Key Tasks and Performance Standards

Architect, design, or lead the development of a data related capability / product

Find gaps and/or opportunities to leverage data science to produce business value or organization-wide impact. Lead cross-functional teams to deliver new technical capabilities.

You may be required to:

- Devise novel technical solution
- Combine techniques across domains or other fields
- Work with variety of data: e.g. need to combine different data set for insights and/or capability development

Performance Standards

- Identify and diagnose organizational problems within your domain of expertise
- Drive the adoption of technical standards and innovations

(Technical Leadership) Guide senior management and working level

Provide technical leadership to lead technological advancement and improve scientific performance by guiding the guiding senior management and working level to adopt the right strategies, solution, methodologies, practices, technologies and culture. This may include:

- Present and convince extended senior stakeholders to prioritise and manage system changes
- Select the best methodologies to measure engineering/scientific & team performance
- Advise and guide teams in sub-domain of expertise, including neighbouring sub-domains

Performance Standards

- Demonstrate good knowledge of trending technologies, processes, best practices and modern methodologies to measure scientific performance
- Understand business needs and how it translate technically

(Community Contribution) Grow the technical competency of the DSAI community

Influence beyond area of command and serve a wider community to help grow the technical competency of the community by being on tech panel(s), developing training programs, and fostering an innovative and learning culture. This includes:

- Co-lead / Lead a community track of work e.g. chair tech panels / recruitment interview panels, lead RTS (raise, train, sustain) efforts for your community
- Be an effective technical mentor for senior officers in the community e.g. build and lead high performing technical teams
- Leverage the industry for collaboration and talents outreach

This requires good knowledge of the different community virtual groups, tech knowledge management (KM) sites and community initiatives; as well as knowing our external partners' and vendors' contacts

Performance Standards

- Be a recognized technical leader within the organization
- Demonstrate effective coaching and mentoring
- Ability to conduct interviews for external candidates and internal tech panels to identify technical leaders
- Ability to influence the community to standardize technologies and engineering/scientific practices

Competencies

I'm lazy to edit twice so go to the master list and run this query in your head:

```
SELECT
  DSAI_MAP.Competency,
  DSAI_PL.PL,
  DSAI_MAP.Description
FROM
  DSAI_MAP
  INNER JOIN DSAI_PL
    ON DSAI_MAP.Competency = DSAI_PL.Competency
    AND DSAI_MAP.L4 = DSAI_PL.PL;
```
