DSAI L1

JR11 = Tier 1 SEA Competency

Key Tasks and Performance Standards

Address well-defined data science problems

"Well-defined problems" are those where the problem statement has been defined, the algorithms/methodologies/techniques have been identified, and the data is available.

Officer is expected to independently complete routine tasks which are achievable by following established solutions, guides, playbook and/or best practices in this org, academia, or industry, using enterprise and/or common platforms and internal tools (e.g., RAPID, JupyterHub).

Adopt good documentation and coding practices for knowledge management (KM) which can help to facilitate on-boarding of new officers and prevent loss of work.

- Document the analytical process and findings on KM (Confluence) spaces for knowledge sharing
- Version control scripts and notebooks, consider reusability, no hard-coding password, etc.

<u>Performance Standards:</u>

- Demonstrate knowledge and usage of the data science project workflow
- Demonstrate the ability to use common enterprise tools
- Execute your data project tasks and present your work

Competencies

I'm lazy to edit twice so go to the master list and run this query in your head:

```
SELECT
  DSAI_MAP.Competency,
  DSAI_PL.PL,
  DSAI_MAP.Description
FROM
  DSAI_MAP
  INNER JOIN DSAI_PL
    ON DSAI_MAP.Competency = DSAI_PL.Competency
    AND DSAI_MAP.L1 = DSAI_PL.PL;
```
